

Project overview: Deploy and maintain assets in Power BI Service

Introduction

As you begin this Guided Project, take a moment to consider how much you have accomplished. Keep up the great work!

For this activity, you will participate in a more hands-on experience. The following Guided Project provides an opportunity to solidify your understanding of previously learned concepts while introducing you to new challenges that will be explored in depth later in the course. We believe there's always room to learn something new, and the great news is we will provide you with detailed guidance every step of the way.

Guided Project Overview

This project provides hands-on training on how to deploy Power BI dashboards and reports to users in your organization. You will learn how to create workspaces, manage access, upload reports, create dashboards, add quick insights, create apps, and implement row level security.

After completing this guided project, you'll be able to:

- Create and manage workspaces in the Power BI Service
- Upload reports to the Power BI Service
- Create dashboards in the Power BI Service
- Add quick insights to dashboards in the Power BI Service
- Create apps in the Power BI Service
- Implement row level security in the Power BI Service

Conclusion

You may already be familiar with some of the tools and concepts in this project, and if so, this will serve as an excellent opportunity to deepen your understanding and refine your skills.

This project also prepares you for some of the topics covered in the Microsoft Certified Exam PL-300: Power BI Analyst. This globally recognized certification is industry-endorsed evidence of your technical skills and knowledge. To learn more about the exam, review the [Microsoft PL-300 study guide](#)
